Migration

Why?

Migration Data Portal

General figures

Total number of international migrants at mid-year 2020 Source: UN DESA, 2020	280.6 million
Share of female migrants in the international migrant stock at mid-year 2020 Source: UN DESA, 2020	48.1 %
Share of international migrants 19 years and younger residing in the country/region at mid-year 2020 Source: UN DESA, 2020	14.6 %
Share of international migrants 65 years and older residing in the country/region at mid-year 2020 Source: UN DESA, 2020	12.2 %

Observing migration

- Net migration rate

Environmental migration

- **Environmental migration** is the “movement of persons or groups of persons **[environmental migrants]** who, predominantly for reasons of sudden or *progressive changes in the environment that adversely affect their lives or living conditions*, are forced to leave their places of habitual residence, or choose to do so, either temporarily or permanently, and who move within or outside their country of origin or habitual residence” (IOM, 2019).

Climate migration

- **Climate migration** is the movement of a person or groups of persons who, predominantly for reasons of sudden or progressive change in the environment **due to climate change**, are obliged to leave their habitual place of residence, or choose to do so, either temporarily or permanently, within a State or across an international border. (IOM, 2019).
- Climate migration is a **subcategory** of environmental migration; it defines a singular type of environmental migration, **where the change in the environment is due to climate change**.

Climate refugees

- **Climate refugees or environmental refugees**: There is a growing consensus among concerned agencies, including IOM and UNHCR, that the use of these terms is to be avoided.
- These **terms are misleading** and fail to recognize a number of key aspects that define population movements in the context of climate change and environmental degradation, including that environmental migration is mainly internal and not necessarily forced, and the use of such terms could potentially undermine the international legal regime for the protection of refugees

Environmental/Disaster displacement

- **Environmentally displaced person** refers to “persons who are displaced within their country of habitual residence or who have crossed an international border and for whom *environmental degradation, deterioration or destruction is a major cause of their displacement*, although not necessarily the sole one” (IOM, 2011:34 in IOM, 2014:13).
- **Disaster displacement** “refers to situations, where people are forced or obliged to leave their homes or places of habitual residence, in particular as a *result of or in order to avoid the effects of disasters triggered by natural hazards*. Such displacement may take the form of spontaneous flight or an evacuation ordered or enforced by authorities. Such displacement can occur within a country, or across international borders” (The Nansen Protection Agenda, 2015).

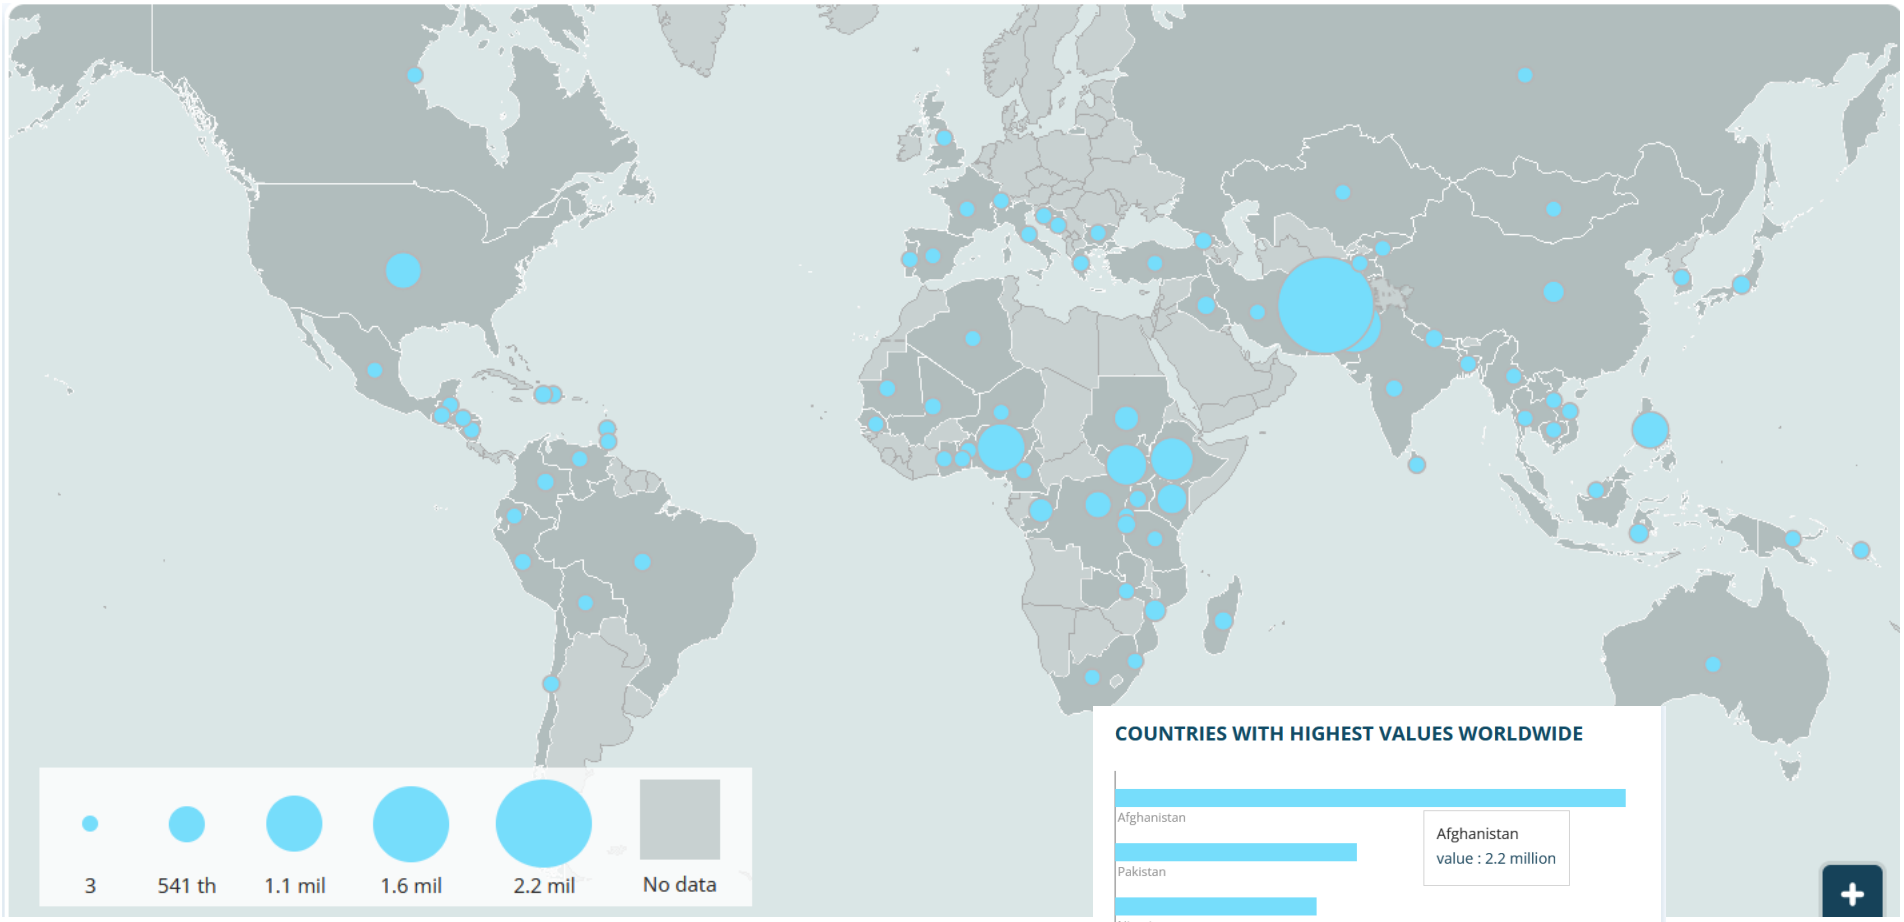

INTERNAL DISPLACEMENTS DUE TO DISASTER, 2013-2022

Relocation (or not?)

- **Planned relocation** "in the context of disasters or environmental degradation, including when due to the effects of climate change, [refers to] a *planned process* in which persons or groups of persons move or are assisted to move away from their homes or place of temporary residence, are settled in a new location, and provided with the conditions for rebuilding their lives. The term is generally used to identify relocations that are carried out within national borders under the *authority of the State* and denotes a long process that lasts until "relocated persons are incorporated into all aspects of life in the new setting and no longer have needs or vulnerabilities stemming from the Planned Relocation. (IOM, 2019 ; Georgetown University, UNHCR, and IOM, 2017).
- **Trapped populations** refers to populations "who do not migrate, yet are situated in areas under threat, […] at risk of becoming 'trapped' or *having to stay behind*, where they will be more vulnerable to environmental shocks and impoverishment" (IOM, 2019).
